- IntelliJ
- VS Code

3rd Party Libraries
- Flutter Bloc
- Provider
- HTTP & Dio
- Google Maps
- Flutter Local Notifications
- Apple Sign In
- Facebook SDK
- Firebase Cloud Messaging
- Firebase Deep linking
- Firebase Authentication
- Firebase Crashlytics

Version Control
- Git (GitHub/GitLab)

PROJECT

Deal Diner
- This application for booking a table for a particular restaurant. user can search and filter by his price and category and user can select the perticular area address from the **google Map** and after he/she can see the offer and also book the table from perticular date and time.
- The application uses proper coding guidelines and structure.

PROJECT

Sherazi

- An exclusive dating application created for pets with the help of flutter for android and ios. Users can create a profile for their pets and match them with other pets who have the same interests.
- The application uses **BLOC** architecture with proper coding guidelines and structure. It also has **In-App Purchase** for the subscription.

Girvalley

- An online shopping application to purchase dairy products at your convenience. The application is built via flutter with google maps to deliver dairy products to users at their doorsteps.
- Users can refer to other people and earn the products. The application is multi-language to make ordering easier for the users.
- The application uses **BLOC** architecture with **Google Maps**. It uses **Firebase Push Notification** for delivery and subscription reminders.

Bash Bite

- A Food delivery application for the customer to order food at their convenience. The application is divided into two roles – Base Bite Customer & Base Bite Dasher. A Dasher is basically for the delivery person.
- The Application uses Firebase Messaging for notifications, **Stripe for payments**, Google Maps for address management, and Firebase RTD for the chat.

MacroTutor

- A learning management application for students and tutors. Students can book the class with the tutor for multiple subjects in groups or individually.
- The application is designed for both tutor and student to maximize learning with all management options like scheduling a class, subject materials, payments, and much more.
- The application uses **BLOC** architecture with proper coding standards. It is developed for two users and works entirely dynamically. The client can toggle any feature in the application via the admin panel. It uses **Firebase Push Notification** for class and payment reminders. The payment is managed by the **Flutter Wave** payment gateway.

EDUCATION

08/2018 – 05/2021	**Master of computer application(M.C.A)** Maharaja sayajirao University(MSU), Vadodara. CGPA – 7.1
05/2015– 05/2018	**Bechler of computer application(BCA)** SSCCS, Bhavnagar. Percentage – 60

ACHIVEMENTS

- Successfully completed 3 Online courses from Udemy.
- Participated in smart India hackathon
- Complete the TCS Career Edge – Knockdown the Lockdown Online Course
